### IMPORTANT

The CS20 includes the mounting kit, special shim/gasket, high pressure hose hookup kit, wiring harness, dash bracket kit, and installation instructions. The PTO is available with a pulse generator (pick-up) for use with the Muncie Digital Tachometer - 38MK2000 (request MP92-04) or use with the Muncie digital switch SPD-1000A to control the engagement or overspeed protection of the PTO. Contact your **Muncie Application Specialist for** assistance with these options.

## **CS20 DISASSEMBLY AND ASSEMBLY**

(Reference Exploded View on page 2)

#### $\bigtriangledown$ denotes special service procedures

#### **DISASSEMBLY PROCEDURE**

- 1. Remove the CS20 input gear, by removing the set screw in the pad and driving the idler shaft from the housing. (28,30)
- 2. Remove the set screws (42) from the bearing cover (5) which hold the drag brake springs (43) . Position the housing so that the springs fall from housing.
- 3. Remove the four large socket capscrews (4) which hold the back cover to the PTO housing.
- Position the housing against a bench block and hit the end of the output shaft with a soft face hammer to remove the entire output shaft assembly with bearing cover (5).
- 5. Remove the two pipe plugs (41) from the bearing cover. This exposes the ball bearing assembly within the cover.
- 6/ Using a 1/4" punch and alternating between the two holes, drive the bearing and shaft \_\_\_\_\_\_ assembly from the bearing cover.
- Using a bearing puller remove the rear bearing (8) by grabbing the drag brake plate (10) and removing both pieces. The bronze brake disk (11) can be removed.
- Note: The second sec
- The piston and clutch pack may be serviced without removal of the drag brake. Using snap ring pliers, remove the snap ring (26) located on the output shaft end while gently pushing on the piston cup (24).
- 10. Pull the piston cup (25) from the shaft and the piston (22) will go with it.
- 11. Tap the piston cup on a wood surface to remove the piston.
- 12. Remove the spring (21). The clutch friction discs (19) and spacer discs (20) and inner clutch hub (18) can be removed by pointing the shaft end down.
- 13. With the drag brake removed, the snap rings (13 & 14) on this end of the bell gear can be removed with snap ring pliers. This allows the bell gear to be removed towards the closed end. The internal bearing (16) of the bell gear can easily be removed.

#### **REASSEMBLY PROCEDURE**

- The reassembly of the unit is made in reverse of the disassembly. The re-use of seals, orings and snaprings are not recommended.
- Be sure to lubricate the o-rings and all bearings upon installation. Torque capscrews to the values shown or to the following values. 5/16 capscrews 18 ft. lb. 3/8 capscrews 36 ft. lb. 1/4 set screw 9 ft. lb.
- 16/ The Input Gear is replaced as a set which includes the gear, cone spacer, & bearings. Slide
- this sub-assembly into the housing to line up the idler shaft.
- $\overline{\sqrt{17}}$  Tap the idler shaft into the housing and through both bearing races.
- Tap the idler shaft in the reverse direction so that it is flush with the bearing in this assembly. Insert the thickest shim that can be installed by hand in the gap between the bearing and housing. Remove shim and select the next thicker shim and drive it into the gap. Rotating the gear to make sure it easily rotates. The recommended bearing pre-load is .002" to .006" loose. (The cone spacer sets this per-load and measurement is not required.)
- $\sqrt{19}$  Tap the idler shaft into position and install set screw.

#### SCREW-IN SOLENOID VALVE INSTALLATION

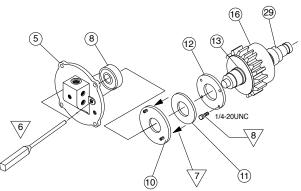

- Separate the coil from the valve assembly. Insert the valve cartridge into the rear cover and torque to 20 ft. lb.
- 21. Slip one o-ring and the coil over the valve. Slip the second o-ring on.
- Very Place thread locking compound on the post threads and install nut. Torque the nut 4 to 5 ft. lb. max.
- 23/ Place thread sealant on pipe plugs. Torque 10-16 ft. lb.

### **DROP-IN SOLENOID VAVLE INSTALLATION**

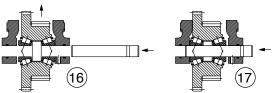

- 24. Valve is pushed into housing cavity.
- $\sqrt{25}$  Use two 5mm capscrews to mount solenoid. torque to 2 3 ft.lb.

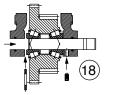

### DRAG BRAKE ADJUSTMENT

- 26. When installing the rear cover be sure to align the roll pins in the drag brake plate with the holes in the rear cover.
- 27. After the cover has been attached to the housing insert the springs into the holes.
- 28. Insert the setscrew over the spring and turn the screw seven (7) full turns.
- $\label{eq:solution} \ensuremath{\text{29. Follow}}\xspace \ensuremath{\text{ for the test}}\xspace \ensuremath{\text{ adjustment}}\xspace \ensuremath{\text{ procedures}}\xspace \ensuremath{\text{ in the CS20}}\xspace \ensuremath{\text{ owners}}\xspace \ensuremath{\text{ manual}}\xspace.$
